What's New for Home Health Spas

Towel Warmer

Home spas are basically about elevating the bath from a room where you keep the tub, sink, and toilet, to a convenient retreat where you can escape for a while.

WarmiTowel adds one level of pampering with the soothing comfort of a warm towel after a shower, sauna, or exercising. Wall, floor, and pivoting models draw on electric or hydronic (hot water) heat sources and feature designer finishes on all-brass construction. In a small bathroom, towel warmers make efficient, quiet room heating, too.

- Consider other finishing touches
